

Acknowledgment of Academic Honesty Policy

Prof. Ethan L. Miller
CSE 13S
University of California, Santa Cruz
Fall 2022

I have read and understand the policy on academic dishonesty (more commonly referred to as “cheating”) as described in the syllabus and Personal Responsibility Document for the Fall 2022 offering of CSE 13S and the University policy on academic honesty, listed at <https://ue.ucsc.edu/academic-misconduct.html>. I have asked for clarification of any details of these policies that I did not understand.

In particular, I understand that obtaining solutions, in whole or in part (text or source code) to graded class assignments from any source—including work done by former or current Computer Science students, professors, tutors, other humans, animals, zombies, or space aliens, and materials found on the Internet, *et cetera*—that is not explicitly sanctioned by Prof. Miller or the teaching assistants is unacceptable. I also understand that *providing* full or partial solutions to anyone else, whether in this class or not, is likewise unacceptable.

I understand that all work I submit must be exclusively my own. Information and assistance from the professor, teaching assistants, course tutors *listed on the course web site*, course textbooks as listed in the syllabus, course web site, and code and documentation (e.g., man pages) *supplied with the C Standard Library (libc)* may be freely used without acknowledgment.

I agree to document ***all other sources of aid***, even if they are considered acceptable, as part of each submitted assignment. Failure to do so will be considered plagiarism and/or cheating.

This policy is a clarification of university policy:

As defined in the Handbook, plagiarism includes not only the literal incorporation—without appropriate citation—of phrases and sentences from the work of another person, but also the use of “views, opinions, or insights of another without acknowledgment” and “paraphrasing the characteristic or original phraseology, metaphor, or other literary device of another without proper attribution.”

There is no flexibility in this policy. If you cheat, you fail, and your academic career is likely to be prematurely terminated. The reason that you cheated is entirely immaterial. This policy applies equally to all parties, regardless of whether they are transmitting or receiving the material in question.

I have read and understood this document. Time was provided in class to ask clarifying questions.
